ENGINEERING · INTEGRATION · MAINTENANCE

Connecting and securing your major projects.

FOSS brings infrastructure engineering, on-site delivery and system integration together for commercial buildings, hotels, airports, industrial facilities and critical infrastructure.

Fiber-optic networks & structured cabling

Data center connectivity & integration

AI CCTV & physical-security systems

Telecom networks, voice & maintenance

From design review to operational handover

A defined scope. Coordinated interfaces. Documented testing. Clear support responsibilities.

OUR STRENGTHS

People. Expertise. Delivery.

Project delivery teams

Experienced engineers and project managers coordinate the design, installation, testing and handover of your infrastructure.

Multiskilled engineers

Technical expertise across networks, security and building systems supports both implementation and aftercare.

Design through installation

FOSS turns operating requirements into an actionable scope, then coordinates the team that brings it into service.

Supplier relationships

Technology and supplier coordination helps align specifications, availability and manufacturer support with the project.

Operating-cost planning

Project and maintenance models can be structured around operating budgets and the lifecycle of installed systems.

Maintenance & service desk

Support and escalation can be planned for continuous operations. Coverage, including any 24/7 service, follows the agreed maintenance contract.

Our values

Customer first

Keep customers at the center of everything we do.

Humility

Stay open to learning, feedback and change.

Passion

Bring energy, commitment and care to delivery.

Integrity

Do the right thing and take responsibility.

One team

Work across organizational boundaries toward shared goals.

FOSS + M5 Technologies

Official M5 Technologies integrator in the UAE. Secure voice connectivity, telephone modernization and maintenance integrated with FOSS infrastructure delivery.

PROJECT REFERENCE

Abu Dhabi Airports: airport-wide fiber network

FOSS’s corporate presentation records a major fiber-network contract awarded in March 2015 to connect existing Abu Dhabi airport terminals with the then-planned Midfield Terminal.

2015	1,400 km	9
Reported contract award	Stated fiber-cable scope	Campus data centers in stated scope

The infrastructure need

Connect existing airport terminals to a new terminal programme through a resilient fiber backbone, with redundant connections to campus data centers.

The FOSS scope described

The presentation describes design and installation of the airport-wide fiber network, including single-mode fiber cabling and intelligent patching. It identifies Abu Dhabi Airports Company (ADAC) as the project reference.

The figures come from a historical FOSS corporate presentation that discussed completion as imminent in February 2017. They describe the scope reported at that time and are not presented here as independently verified as-built quantities or a current project status.

QUALIFICATION & NEXT STEPS

Prepare your tender dossier.

ISO 9001

The presentation records ISO 9001:2008 certification from 2011. Request the current certificate, legal entity, scope and validity dates for your tender.

RCDD / BICSI

The presentation highlights design expertise. Individual credentials must be matched to the engineers assigned to your project.

SIRA / MCC

Physical-security and CCTV credentials for Dubai and Abu Dhabi are referenced in the presentation. Confirm the current approvals applicable to the work and location.

ADDC / AADC

Competency credentials for work on or near live and passive network equipment are referenced. Confirm personnel authorization and current work permits for the site.

ICT prequalification references in company materials

du / EITC | **DAEP** | **Etisalat** | **ADNOC Group** | **UAE Armed Forces**

Abu Dhabi Police | **ADAC** | **DXB**

Historical qualification references are not evidence of current validity. Confirm the applicable legal entity, personnel, scope and expiry for each tender.

Discuss your project with FOSS

Share the location, scope, drawings or bill of quantities, required dates and tender qualification checklist.
